SimNewB™ Congenital Anomaly Kit

The SimNewB Congenital Anomaly Kit was designed by Laerdal with the American Academy of Pediatrics to meet the training requirements of the Neonatal Resuscitation Program. The SimNewB Congenital Anomaly Kit is ideal to train for the unique needs of neonates born with congenital anomalies.

Being prepared for high risk, low frequency events such as resuscitating a newborn with a congenital anomaly requires an effective team that possess the skills required to act swiftly, decisively, and accurately. The SimNewB Congenital Anomaly Kit helps healthcare providers prepare for rare emergencies in a risk free environment.

Cystic Hygroma

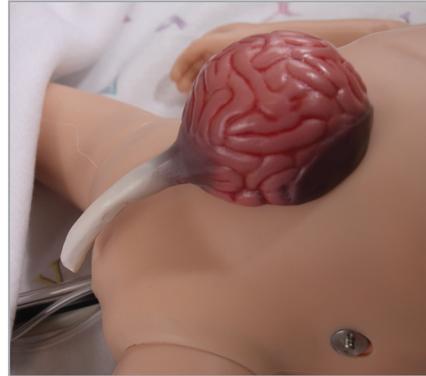

Cleft Lip

Polycystic Kidneys

Omphalocele
